Innovation through institutional library and Central Research Laboratory (CRL)-

Many of the main benefits students derive in college are associated with the library. Outside of lecture theatre, most students spend their time in the library where they study and exchange insights.

Students do their academic work / studies collaboratively in the carrels and study rooms of the library. The Library is constantly noting student use patterns and is attempting to accommodate by offering an inviting environment. We've made our library spaces more inviting, more personal. When you come in, you get the sense that someone cares about you as a student in that environment. It becomes sort of a home away from home.

More than ever, students are conducting thesis and independent research projects and other substantive academic work. In essence, this involves meeting in a faculty mentor's office, laboratory, research cell and spending research time in the library delving into archives, digital resources, using specialized search engines or accessing the expertise of a trained research librarian.

Developing Creativity –

- a) **Pilot Projects-** The project work is an integral part of curriculum at UG and PG level. We achieve this by providing projects in classroom and homework assignment. The projects are done including poster making and models at departmental level related to dentistry. Students remain active, work cooperatively, interact with each other, take responsibility and develop self-confidence. Innovative pilot project explores aspects of teaching and learning in dental undergraduate education

b) Interdepartmental meets -

In today's complex world we must educate not just for competence, but for capability thus we at Surendera indulge in interdepartmental meets for further educational research and valuable addition to the curriculum. (Refer 1.2.1 for IDM's documentary evidence)

Boosting Analytic skills - After introducing the students to the clinics, they are thoroughly trained by senior staff and faculty but once that training is done, we allow the students to design the treatment planning of their respective patients on the basis of their own knowledge and best of understanding of their cases. Hands-on learning is a form of experiential learning which involve students reflecting on their skill. Hands-on teaching on models related to dental implants, lasers, and basic life support are being conducted.

RESEARCH PROJECTS

2016

1. **Dr. Navjot** - Combined effectiveness of PRF & bone graft in the management of endodontically treated mandibular grade II furcation defects when used with or without diode laser: A Randomized Controlled Clinical trial.
2. **Dr. Satwant kaur** - To comparatively evaluate different blood glucose levels & clinical parameters in subjects suffering from chronic periodontitis with or without type II diabetes mellitus before & after the non-surgical periodontal therapy: A Randomized Controlled trial.
3. **Dr. Isha Sharma** - An invitro comparative evaluation of the effect of dietary acid on dentinal tubular occlusion achieved by diode laser application when used alone or in combination with fluorocalcium phosphosilicate containing dentrifices.

2017

1. **Dr. Samyak Belkhede** – Comparative evaluation of C reactive protein in pregnant women with or without periodontitis: A Randomized Controlled trial.
- Dr. Samyak Belkhede** - Library dissertation: Comparative evaluation of the PRF Bandage versus Hemostatic material (Gelatin Sponge) assisted palatal wound healing of donor site after Free Gingival Graft – A Case Series.
2. **Dr. Shashank arora** – Awareness of periodontal disease & systemic health intrarelacion: A survey among medical professionals.

2018

1. **Dr. Puneet Kalra** – Comparative evaluation of concentration of Visfatin in GCF & serum in women suffering from periodontitis with or without PCOS before & after non-surgical periodontal therapy: A Randomized Controlled Clinical trial.
2. **Dr. Piyush Pareek** – Evaluation of the clinical efficacy of Diode laser (940nm), Propolis extract when used alone or in combination in treating Dentinal hypersensitivity – A Randomized Controlled Clinical trial.
3. **Dr. Geyasri Vinnakota** – Comparative evaluation of immediate implant loading with & without Concentrated Growth Factors (CGFs) at healed edentulous site: A Randomized Controlled Clinical trial.
- Dr. Geyasri Vinnakota** - Library dissertation: To evaluate the efficacy of parallel incision frenectomy performed under magnification in terms of Oral hygiene maintenance & patient perspectives: Pilot study of two cases.

2019

1. **Dr. Abdul Mannan** – Comparative evaluation of the effect of parallel incision & Diode laser assisted frenectomy on oral hygiene & patients' prospective: A Randomized Clinical trial.
2. **Dr. Pankaj M. Surana** – Assessing Oral health related knowledge, attitude & practices among nursing students in Bikaner subdivision: A Questionnaire study.
3. **Dr. Hidesh Thokchom** – Comparison of plaque removal efficacy of Oral B Charcoal sensitive extra smooth bristle versus Oral B Pro health cross action bristles manual tooth brushes using a common dentrifice: A Randomized Controlled Clinical trial.

2020

1. **Dr. Deepika Choudhary** – To evaluate the effect of Advanced Platelet Rich Fibrin (A-PRF) on Peri-Implant soft tissue & Crestal bone in immediately loaded dental implants: A Randomized Controlled Clinical trial.
2. **Dr. Sandeep Kumar** – Evaluation of effect of ABO blood types on periodontal status in Sriganganagar District, Rajasthan, India.
3. **Dr. Mayank Dave** – Efficacy of commercially available Herbal & Non-herbal Toothpastes in controlling of Plaque & Gingivitis among school children aged 15 to 17 years in Hanumangarh district.
