10.	Highlights of the event- Brief about the main highlights of the event. Knowing how networks are built gives you a better understanding of what physical or logical vulnerabilities are introduced by choosing one particular network design over another. Knowing how packets are formed gives you a better understanding of how they can be crafted or modified to achieve a specific purpose. Knowing how packets are transmitted and delivered gives you a better understanding of what can happen to packets as they travel from source to destination. A good understanding of the basics of networking and TCP/IP is critical to identifying, understanding, and correcting vulnerabilities in your converged environment.

No.	Event Report
1.	Name & Level of events- Ethics
2.	Background/Introduction Ethics is a system of moral principles. They affect how people make decisions and lead their lives. Ethics is concerned with what is good for individuals and society and is also described as moral philosophy. The term is derived from the Greek word ethos which can mean custom, habit, character or disposition. Ethics covers the following dilemmas: how to live a good life, our rights and responsibilities, the language of right and wrong, moral decisions - what is good and bad?

1.	<p>Name & Level of events-</p> <p>Workshop on Qualitative research analysis</p>
2.	<p>Background/Introduction</p> <p>Qualitative research is defined as a market research method that focuses on obtaining data through open-ended and conversational communication. This method is not only about "what" people think but also "why" they think so. For example, consider a convenience store looking to improve its patronage. A systematic observation concludes that the number of men visiting this store are more. One good method to determine why women were not visiting the store is to conduct an in-depth interview of potential customers in the category. Qualitative research is based on the disciplines of social sciences like psychology, sociology, and anthropology.</p>

10.	Highlights of the event- Brief about the main highlights of the event. Knowing how networks are built gives you a better understanding of what physical or logical vulnerabilities are introduced by choosing one particular network design over another. Knowing how packets are formed gives you a better understanding of how they can be crafted or modified to achieve a specific purpose. Knowing how packets are transmitted and delivered gives you a better understanding of what can happen to packets as they travel from source to destination. A good understanding of the basics of networking and TCP/IP is critical to identifying, understanding, and correcting vulnerabilities in your converged environment.
