	Basic Biostatistics & Research methodology is a way of explaining how a researcher intends to carry out their research. It's a logical, systematic plan to resolve a research problem. A methodology details a researcher's approach to the research to ensure reliable, valid results that address their aims and objectives. It encompasses what data they're going to collect and where from, as well as how it's being collected and analyzed.

No.	Event Report
1.	Name & Level of events- WORLD DAY FOR SAFETY AND HEALTH AT WORK (28/04/2023) SEMINAR Level- College Level
2.	Background/Introduction The World Day for Safety and Health at Work is celebrated annually on 28 April to promote the prevention of occupational accidents and diseases globally. It is an awareness-raising campaign intended to focus international attention on the magnitude of the problem and on how promoting and creating a safety and health culture can help reduce the number of work-related deaths and injuries. In 2003, the International Labour Organization (ILO), began to observe World Day in order to stress the prevention of accidents and diseases at work, capitalizing on the ILO's traditional strengths of tripartism and social dialogue.
3.	Venue- Surendera Dental College And Research Institute, Near HH Garden, Sadulshahar road, Sri Ganganagar, Rajasthan
4.	Sponsors- None
5.	Inauguration- The day was celebrated as one day event (Seminar) of two hours/day. The day started with Brief introduction of the day to the students and faculty followed by inauguration by Director Principal Dr. Sandeep Kumar and by HOD's of Departments. Faculty of Departments, postgraduate students and interns were present during the inauguration.
6.	Speakers/Judges/Chairman/Panel Team- Brief introduction with their respective terms Judge for poster competition- Dr. Meenuka, Professor (Department of Oral and maxillofacial surgery)

1.	Name & Level of events- ADD-ON COURSE - ON INFECTION CONTROL IN DENTISTRY, HAND WASHING AND GLOVING TECHNIQUES on 02/05/2023 SEMINAR AND WORKSHOP Level- College Level
2.	Background/Introduction During dental procedures, as dental health care worker is in contact with body fluids like air droplets, saliva and blood. so cross contamination can occur from doctor to patient and vice versa so risk of spread of communicable diseases like hepatitis B, hepatitis c, HIV, covid-19 and others. So for prevention of these communicable diseases there are protocols to be followed in dental scenario. Like Personal protective measures - like gloves, mask, head cap, eye glasses. Always wear gloves while directly handling saliva and blood or indirect handling like cleaning and washing. It is the responsibility of dentists to establish a protocol that prevents or limits the spread of infection in dental practice for their patients, their staff and themselves. So, a seminar and workshop was planned.

1.	Name & Level of events- <u>ADD-ON COURSE – ON BIOMEDICAL WASTE MANAGEMENT IN DENTISTRY, PREVENTION AND MANAGEMENT OF CHEMICAL HAZARDS</u> on 19/06/2023 SEMINAR AND WORKSHOP Level- College Level
2.	Background/Introduction Biomedical waste or hospital waste is any kind of waste containing infectious (or potentially infectious) materials generated during the treatment of humans or animals as well as during research involving biologics. ⁽¹⁾ It may also include waste associated with the generation of biomedical waste that visually appears to be of medical or laboratory origin (e.g. packaging, unused bandages, infusion kits etc.), as well research laboratory waste containing biomolecules or organisms that are mainly restricted from environmental release. As detailed below, discarded sharps are considered biomedical waste whether they are contaminated or not, due to the possibility of being contaminated with blood and their propensity to cause injury when not properly contained and disposed. Biomedical waste is a type of biowaste. The latest guidelines for segregation of bio-medical waste recommend the following color coding: ⁽²⁾ <ul style="list-style-type: none"> • Red Bag – Syringes (without needles), soiled gloves, catheters, IV tubes etc. should be all disposed of in a red colored bag, which will later be incinerated. • Yellow Bag – All dressings, bandages and cotton swabs with body fluids, blood bags, human anatomical waste, body parts are to be discarded in yellow bags. • Cardboard box with blue marking – Glass vials, ampules, other glass ware is to be discarded in a cardboard box with a blue marking/sticker. • White Puncture Proof Container (PPC) – Needles, sharps, blades are disposed of in a white translucent puncture proof container. • Black Bags – These are to be used for non-bio-medical waste. In a hospital setup, this includes stationary, vegetable and fruit peels, leftovers, packaging including that from medicines, disposable caps, disposable masks, disposable shoe-covers, disposable tea cups, cartons, sweeping dust, kitchen waste etc.
